

VEGA SELECTFEED

Versatile multi-lane feeder for small, medium and large flatwork.

The VEGA SELECTFEED is designed to handle all kind of flatwork in small and large laundries and is ideal for quality finishing of table linen.

As standard the machine includes a suction box as well as a suction facility under the belts.

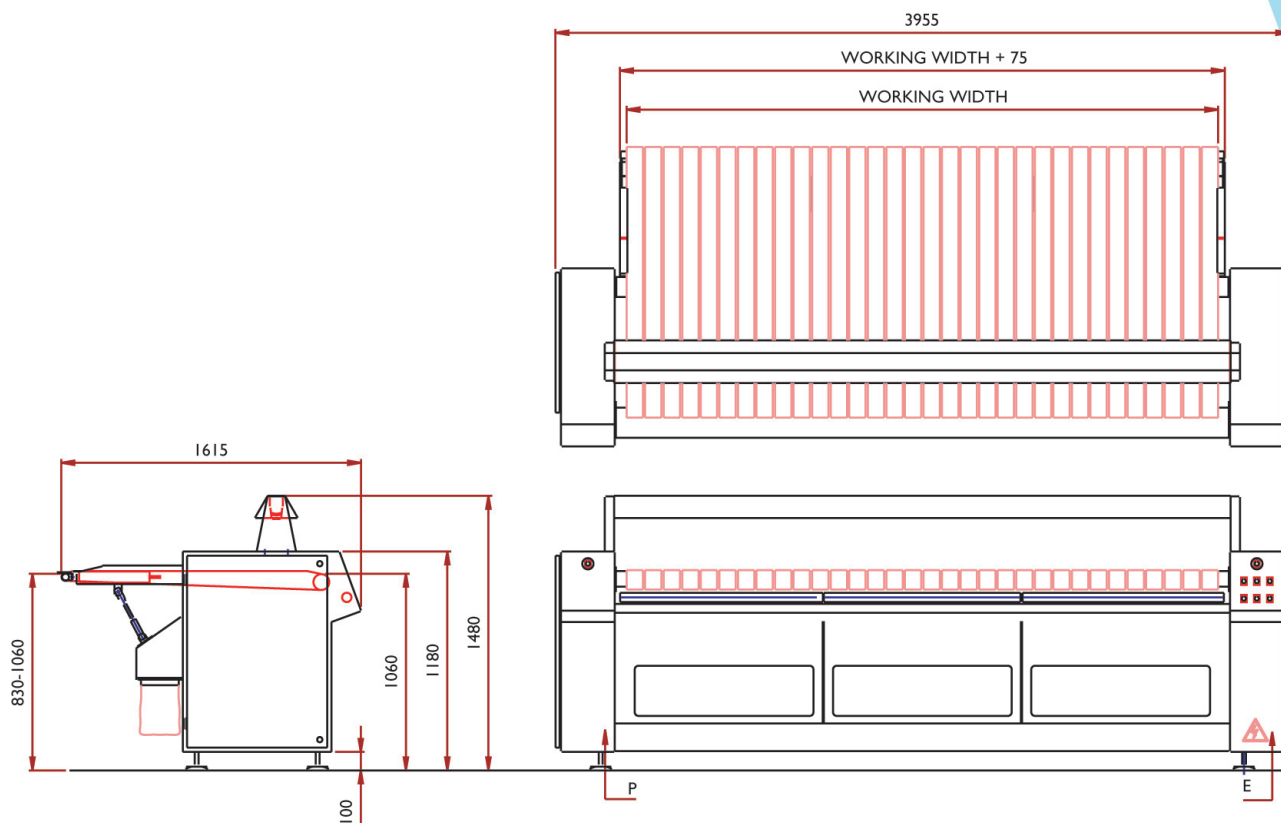

The suction under the belt make sure that pieces are hold in position after the operators are feeding the leading edge of the linen manual onto the special perforated feeding belts.

The suction box makes sure that the trailing edge of the linen is stretched during conveying.

The VEGA SELECTFEED is a completely freestanding machine. Very compact, floor-saving and easy to ship and transport, that will operate in front of every make of ironer.

Trolley with linen can be pushed under the front of the machine so that the operator has easy access to the linen and can feed the linen from a ergonomic feeding height.

As an optional models are available with an automatic spreading lay down system for large flatwork. When feeding small pieces manual in multi-lane the spreading lay down system will move backwards.

TECHNICAL SPECIFICATIONS:

Working width : up to 4.000mm
 Electric connection : 3 x 400V + 0 + E, 50 Hz.
 Electric consumption : 3,5 kW, 16 Amp.

OPTIONAL:
