Finishing Equipment

VM - Folding, Sorting & Stacking Handles a Variety of Sizes

For automatic folding, sorting and stacking a large variety of mixed articles. The machine folds and sorts the mixed articles automatically by size and stacks them on one of the three available stackers.

The operator feeds the towels onto a special stop conveyor. Once a towel is placed on the stop conveyor the folding cycle will start automatically after an adjustable time. Towels are sorted and stacked onto three conveyors below the machine. When these stacks have reach a preprogrammed number of articles the stack is discharged onto a centralized collecting conveyor which then delivers the stack back to the operator. Length folding is done by two moveable folding blades and the cross folding is executed by belt reverse folds.

With this combination, french folding along the length of the articles can be accomplished with either one or two cross folds or a french cross fold.

As standard the machine is equipped with a PLC Touchscreen system with up to 100 separate folding programs. Individual fold parameters can be set for each type of towel processed.

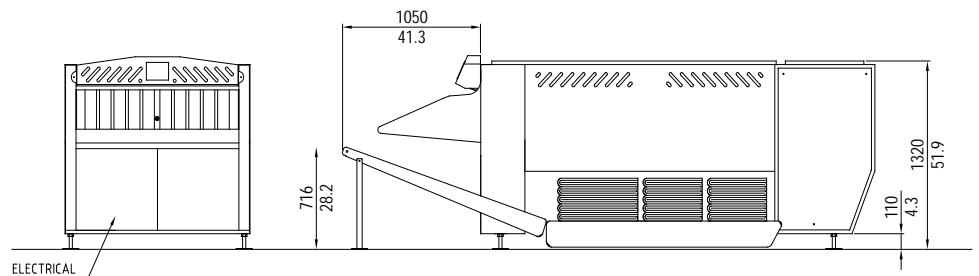

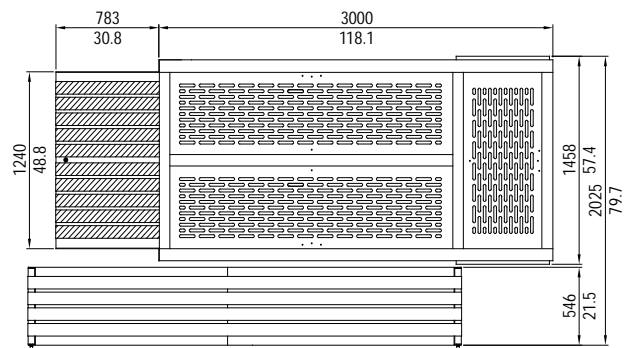

Towel Size	Metric	USA
Width	1200mm	47.25in
Length (standard)	1800mm	70.87in

Technical Specifications

Electrical Requirements	208-230V, 3PH	440-460V, 3PH
Circuit Breaker	15A	6A
Pneumatic connections	13mm	1/2in
Pneumatic consumption	12 liters/pc	2.7 gal/pc
Weight	1650 kg	3630 lbs

Optional
Towel length up to 2400mm / 94in
Fourth Stacker
Length folds by knife
