

LAUNDRY SOLUTIONS FOR ATHLETIC LAUNDRIES

WASHERS, OZONE DISINFECTION AND DRYERS DESIGNED
SPECIFICALLY FOR ATHLETIC LAUNDRIES

- WASHER-EXTRACTORS
- DISINFECTION SYSTEMS
- DRYING TUMBLERS

PROTECT YOUR GREATEST ASSETS WITH SPORTS LAUNDRY SYSTEMS

Quickly disinfecting practice gear, towels, loops and game-day uniforms is critical to the safety and health of your athletes and staff. Unlike most laundry solutions, the sports laundry system is engineered to properly clean and disinfect athletic laundry — helping prevent the spread of viruses, superbugs and bacteria, including MRSA, HIV and hepatitis. You invest a lot in your team as well as laundry and preserving expensive uniforms and equipment. Help keep your players healthy and your athletic program moving forward by investing in a Sports Laundry System.

PRODUCTIVITY, ENERGY EFFICIENCY & COST CONTROL

Catapulting laundry productivity, the Sports Laundry System completes more laundry in less time; cuts water, energy and detergent usage; saves utility and chemical costs; and ensures items are properly washed according to pre-programmed settings that match fabric recommendations. So, you not only disinfect athletic laundry to prevent infection among your athletes, you eliminate the possibility of fabric damage, cut costs and keep pace with incoming jerseys, towels and warm-ups.

KEEPS PACE WITH DIRTY LAUNDRY

It's critical to keep up with the influx of dirty laundry; doing so cuts the risk of infection among athletes — keeping them healthy; ensures items are clean and disinfected for practices and game days; and allows assistants and coaches to focus on teamwork, not laundry. Using the Sports Laundry System, laundry loads can be washed and dried in less than 60 minutes.

TACKLES INFECTION

MRSA — a staph infection that is resistant to antibiotics — can be a big problem in athletic locker rooms, shower rooms and training rooms. Contaminated laundry must be cleaned and disinfected quickly to ensure infection doesn't spread. The Sports Laundry System with a Disinfection Tower is clinically proven to kill 99.9 percent of infectious bacteria and viruses in the wash — helping keep your athletes, training staff and coaches safe and healthy.

SIMPLE TO USE

Using the Sports Laundry System couldn't be easier. Just load the washer, select a program number and press start. Once programmed, the system automatically combines the correct detergents and ozone with the right water temperature, extract speed, mechanical action and water levels. Athletic laundry is properly cleaned to ensure consistent results.

THE TOTAL LAUNDRY SOLUTION FOR YOUR
ATHLETIC LAUNDRY DEPARTMENT

“All kinds of bacteria are floating around fields, artificial turf and locker rooms. It takes one piece of contaminated laundry to cross contaminate. Every facility should have a Sports Laundry System that disinfects and sanitizes.”

- T-JOE BREAUX, ASSISTANT ATHLETIC DIRECTOR & HEAD EQUIPMENT MANAGER, RICE UNIVERSITY

“When we recruit an athlete, we can tell the parents and the athlete that we have a Sports Laundry System in place that will protect them from MRSA and staph infections.”

- PAT CERRONI, HEAD FOOTBALL COACH, UNIVERSITY OF WISCONSIN-OSHKOSH

TACKLING DIRTY LAUNDRY WITH SPORTS LAUNDRY SYSTEMS

How does the system work? The Sports Laundry System teams high-performance washer-extractors and drying tumblers with ozone injection to perfectly fit your athletic laundry production needs.

THE HIGH-SPEED WASHER-EXTRACTOR

Sports Laundry System washers (freestanding or hard-mount models) are engineered to properly clean a variety of items quickly, efficiently and consistently every time. So, no matter who does the laundry, uniforms, warm-ups, loops and towels are perfectly cleaned and ready for game day!

HOW UNIFORMS, LOOPS, HELMETS & PADS ARE CLEANED

Featuring a highly flexible control, the washer-extractor delivers unrivaled programmability for total control over every phase of the wash process — ensuring everything from socks to towels and jerseys are properly cleaned every time. Once the programs are set, simply choose a program number and press start. It couldn't be easier. Nearly every variable of the wash cycle is programmable and automated to combine water temperature and levels with the proper mix of cleaning chemicals, wash rotation action and programmable extract speeds. The washer is programmable for $\frac{1}{4}$ and $\frac{1}{2}$ turn rotations to clean helmets and pads! Automatic chemical injection eliminates human error and the possibility of damage to athletic items. Items are consistently bright and clean. Visit www.sportslaundry.com to view the video!

INCREASE PRODUCTIVITY & SAVE TIME

The washer-extractor produces extract speeds up to 400 G-force, depending on the model selected. As extract speed increases, so does the amount of water removed from every load. In turn, uniforms, warm-ups and towels dry more quickly. Not only do dryers run less often and fabrics experience less heat and mechanical wear — enhancing longevity — athletic facilities save natural gas and electricity. The high-performance washer-extractors in this system can cut dry time by up to 35 percent — preventing dryer bottlenecks and maximizing laundry production.

You'll spend less time doing laundry so you can handle the other critical components of your job. The system's high productivity means you'll complete more laundry per day, in significantly less time!

OZONE INJECTION

A good defensive game plan helps out any offense. The Sports Laundry Systems ozone disinfection helps prevent infection among athletes and staff. It does this by disinfecting contaminated and soiled laundry items, pads and helmets — helping prevent the spread of MRSA, bacteria and viruses.

With the Sports Laundry System, ozone is injected into the wash cycle at precisely the right time and water temperature. Ozone is a safe and powerful cleaning agent naturally produced in our atmosphere that disinfects laundry using mostly cool water. The Sports Laundry System Disinfection Tower is clinically proven to kill 99.9 percent of viruses, bacteria and superbugs, including MRSA, found in soiled athletic laundry.

“One, it [Sports Laundry System] cuts down on hot water consumption for doing laundry; two, it has the ability to disinfect and sanitize; and three, it gives equipment managers peace of mind knowing that infections and microbes are attacked and sanitized.”

- T-JOE BREAUX, ASSISTANT ATHLETIC DIRECTOR & HEAD EQUIPMENT MANAGER, RICE UNIVERSITY, HOUSTON, TEXAS

“The Sports Laundry System is easy to set up and operate. In a short period of time, it has produced noticeable results in the cleanliness and efficiency of our overall laundry process.”

- JEFF REINLAND, ATHLETIC DIRECTOR WALLA WALLA COMMUNITY COLLEGE, WALLA WALLA, WASH.

MEET THE PRO-SERIES TEAM

SPORTS LAUNDRY DRYING TUMBLERS

HIGH-PERFORMANCE DRYING TUMBLER

The Sports Laundry System drying tumblers perfectly dry washed and disinfected items — finishing off the cleaning process. Sized to fit your laundry's productivity needs, these dryers come in a variety of capacities — delivering a quick and even dry using a highly advanced control and properly balanced airflow.

CONTROLLED DRYING

Offering flexibility in how laundry is processed, Sports Laundry System dryers feature programmable cycle types, time-dry, auto-dry and an optional moisture sensing feature — ensuring athletic items are not over-dried. Making things simple for the operator, they also include an automatic reminder to clean the lint screen and an external end-of-cycle signal. An anti-wrinkle and extended-tumble feature initiates unheated tumble action after the end-of-cycle signal. This reduces wrinkles in unattended loads!

MOISTURE SENSING FOR PERFECT DRYING

The moisture sensing system offers 12 programmable dryness levels and additional programmable heat time. It's an optional feature on the 20- through 85-pound capacity dryers, and standard on the stacked models and 115-pound capacity models. The moisture sensing system is critical for the proper drying of delicate jerseys and uniforms — ensuring they are not over-dried or damaged. It targets dryness levels from 0 to 40 percent, using a vast load-to-surface contact area. Once the load reaches its preset dryness level, the control stops dryer operation. The result? Items experience less damage and up to 31 percent less fiber loss — increasing the life of uniforms, towels and other tumble-dried goods.

SAFETY FROM FIRE

All Sports Laundry System dryers offer an optional integrated sprinkler system, a sensing and extinguishing device that squelches dryer fires before they get out of control. This feature ensures athletic facilities are better protected from the hazards and damage caused by dryer fires.

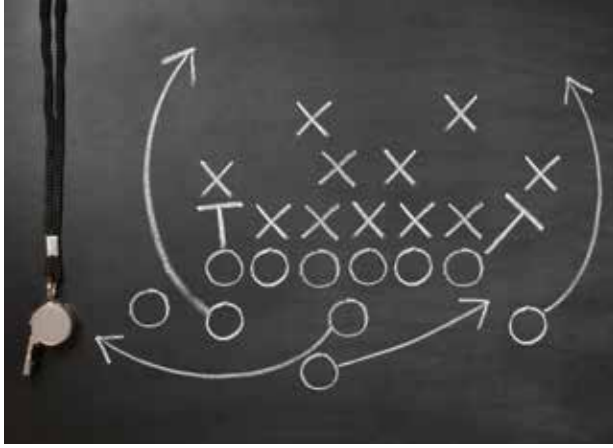

"Items removed from the washer are nearly dry. Our system at IMG really speeds up the process."

- CORTEZ ROBINSON, EQUIPMENT MANAGER
IMG ACADEMY, BRADENTON, FLA.

"With the new system, washing time is reduced by 25 percent and things are coming out of the washer almost dry because the spin cycle is dramatically better. Now, uniforms are washed, disinfected and dried in just 40 minutes. Towels are completed in 50 minutes."

- TIM TOON, HEAD VOLLEYBALL COACH & CHAIR
OF THE PHYSICAL EDUCATION DEPT.
WALLA WALLA COMMUNITY COLLEGE

WHAT'S YOUR GAME PLAN?

Completing laundry quickly and correctly is essential to efficient management of high school, collegiate and professional athletic programs and fitness facilities. A Sports Laundry System, which saves time, labor and utilities, disinfects soiled and contaminated uniforms, loops, towels, helmets and pads. The proper care of athletic laundry is an everyday job. It's also essential to the health and safety of the team, training staff and coaches.

LAUNDRY DESIGN & EQUIPMENT SIZING

No two laundries are alike. Sports Laundry Systems offers free customized laundry design, equipment mix selection, and sizing services to help clients achieve an operation with unmatched workflow, efficiency and productivity. Our experience within the industry allows us to closely advise our athletic facility customers — helping them outfit laundries for unmatched productivity using less labor, gas, water and electricity. At Sports Laundry Systems, we offer free operational and production cost studies to our valued customers.

SIMPLE TO INSTALL

Sports Laundry Systems with freestanding E-Series washers slide into place easily without the need for concrete foundations and bolts, making for quick and inexpensive installations. These Sports Laundry Systems are perfect for small areas and second-story installations, or hard to reach locations. When hard-mount REM and RMG-Series model washers are used with a Sports Laundry System, the washers must be bolted to concrete foundations.

GREEN FOCUSED • WATER SAVINGS • NATURAL GAS SAVINGS • LEED

Equipped with green-engrained features that conserve water, energy and natural gas, the Sports Laundry System offers advanced technologies and delivers superior wash quality using considerably less water and virtually no hot water. The Sports Laundry System works best using cold water, which also cuts natural gas costs. The system can also be combined with a water reclamation system for even more savings. How much water does the Sports Laundry System save? Around 50 percent when compared with most other laundry solutions! It also cuts hot water usage by at least 30 percent! No wonder the Sports Laundry System qualifies for Leadership in Energy and Environmental Design (LEED) credits, which can contribute to LEED certification.

STRENGTH & DURABILITY

Sports Laundry Systems are engineered for durability, long-life and ease-of-use to deliver years of trouble-free operation. No wonder Sports Laundry Systems backs its products with warranties that are among the best in the industry!

FLEXIBLE FINANCING

CustomSelect offers flexible financing and competitive fixed rates to address virtually any term requirement or volume need. Feel good knowing that by choosing a Sports Laundry System, your laundry operation will quickly realize significant operational savings.
